# 简化URL路径

## 之前url格式：/admin/ui/button 想简化成/ui/button

```
//router.js文件
class IRouter extends Component {
  render() {
    return (
      <HashRouter>
        <App>
          <Switch>        //外层加入了Switch，按从上往下顺序匹配url，若匹配到/common了，根
据switch的规则只会匹配包含的范围内的一个就停止匹配了，刚好满足我们的需求
            <Route path="/login" component={Login} />
            <Route
              path="/common"
              exact
              render={() => (
                <Common>
                  <Route
                    path="/common/order/detail/:orderId"
                    component={OrderDetail}
                  />
                </Common>
              )}
            />
            <Route
              path="/"
              render={() => (
                <Admin>
                  <Switch>
                    <Route path="/home" component={Home} />
                    <Route path="/ui/buttons" component={Buttons} />
                    <Route path="/ui/modals" component={Modals} />
                    <Route path="/ui/loadings" component={Loadings} />
                    <Route path="/ui/notification" component={Notice} />
                    <Route path="/ui/messages" component={Messages} />
                    <Route path="/ui/tabs" component={Tabs} />
                    <Route path="/ui/gallery" component={Gallery} />
                    <Route path="/ui/carousel" component={Carousel} />
                    <Route path="/form/login" component={FormLogin} />
                    <Route path="/form/register" component={FormRegister} />
                    <Route path="/table/basic" component={BasicTable} />
                    <Route path="/table/high" component={HighTable} />
```

```jsx
                <Route path="/city" component={City} />
                <Route path="/order" component={Order} />
                <Route path="/user" component={User} />
                <Route path="/bikeMap" component={BikeMap} />
                <Route path="/charts/bar" component={Bar} />
                <Route path="/charts/pie" component={Pie} />
                <Route path="/charts/line" component={Line} />
                <Route path="/rich" component={RichText} />
                <Route path="/permission" component={PermissionUser} />
                <Redirect to="/home" />     //放在最后，若上面的都没匹配到，就重定向
到首页
                <Route component={NoMatch} />
              </Switch>
            </Admin>
          )}
        />
      </Switch>
    </App>
  </HashRouter>
  );
  }
}

export default IRouter;
```
